

Blue Cross of California Formulary Drug List

Revised 7/2005

Introduction

For Blue Cross PLUS, Blue Cross PPO and High Option members, Blue Cross of California uses a formulary (preferred list of drugs) to help your doctor make prescribing decisions. This list of drugs is updated quarterly, by a committee consisting of doctors and pharmacists, so that the list includes drugs that are safe and effective in the treatment of diseases. If you have any questions about the accessibility of your medication, please call WellPoint Pharmacy Management Customer Service at 1-800-700-2541 or access our Web site at bluecrossca.com/uc.

In most cases, if your physician has determined that it is medically necessary for you to receive a brand name drug or a drug that is not on our list, your physician may indicate "Dispense as Written" or "Do Not Substitute" on your prescription to ensure access to the medication through our network of community pharmacies, all newly approved FDA drugs with alternatives already on this list will require "Do not substitute" until they are approved by our committee.

Please ask your doctor or pharmacist to refer to the Blue Cross of California Outpatient Prescription Drug List for a complete listing of products.

Use of Generics

Generic drugs are safe and effective equivalents to brand name medications. In many cases, if a generic equivalent is available for a brand name product, the brand name product will be considered non-preferred and the generic equivalent will be on the list. The FDA has endorsed the use of generic equivalents and has found their use to be safe and effective.

Certain medications possess narrow therapeutic dose response characteristics. For medications classified by the FDA as having a narrow therapeutic index (NTI), Blue Cross of California discourages the use of generic substitutions.

Prior Authorization

Blue Cross may require prior authorization of benefit (PAB) for certain drugs to provide a safe and affordable pharmacy benefit. Drugs which require PAB are often medications that are appropriate for only very specific medical conditions. If your physician believes that a medication requiring PAB is medically appropriate, he or she should contact WellPoint Pharmacy Management in order to initiate the Prior Authorization Process on your behalf. The list of drugs are subject to change so please call Customer Service at 1-800-700-2541 or check our website at www.bluecrossca.com to obtain a complete list of PAB drugs.
